DISCLOSURES

STEVEN V. EDELMAN, MD

- Board Member: Senseonics, TeamType1
- Medical Advisory Board: AstraZeneca, BrightSight, InPen, Lexicon, Lilly USA, LLC, MannKind Corporation, Merck, Novo Nordisk, Sanofi-aventis U.S. Inc.
- Speaker's Bureau: AstraZeneca, Lilly USA, LLC, MannKind Corporation, Merck, Sanofi-aventis U.S. Inc.

JEREMY H. PETTUS, MD

- Consultant: Diasome, Eversense, Insulet, Lilly USA, LLC, MannKind Corporation, Novo Nordisk, Sanofi-aventis U.S. Inc.
- Research Funding: Novo Nordisk

TOPICS TO BE DISCUSSED

- Unmet needs in type 1 diabetes
- Historical perspective of type 1 diabetes
- State of type 1 diabetes care in 2018
- Continuous glucose monitoring (CGM)
- Pumps verses multiple daily injections
- Modern basal and ultra- fast acting insulins
- Other adjunctive therapies for type 1 diabetes
- What does the future hold?

UNMET
NEEDS IN
TYPE 1
DIABETES

Unpredictable glycemic variability (GV), increased time in range (TIR)

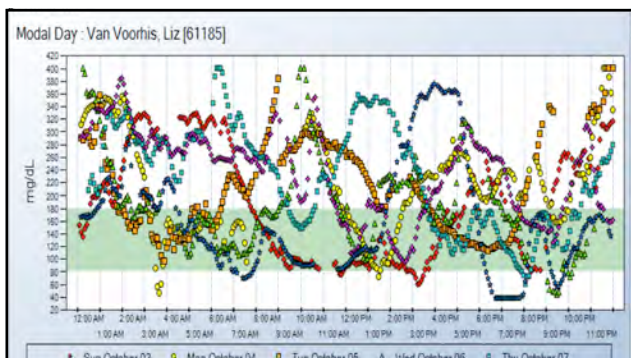

Reaching A1c goal without hypoglycemia

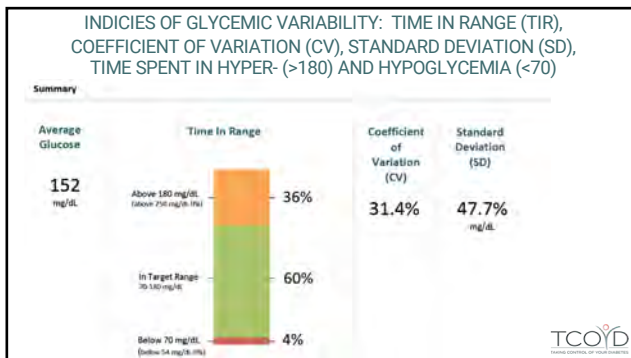

Controlling blood pressure

Preventing and controlling weight gain

Emotional burden of living with type 1 diabetes for the individual and his/her family

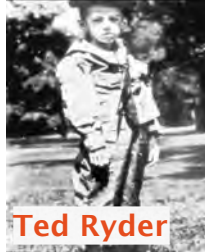

TCOYD

BANTING AND BEST
UNIVERSITY OF TORONTO 1921

insulin

TCOYD
THE CANADIAN ORGANIZATION OF YOUTH WITH DIABETES

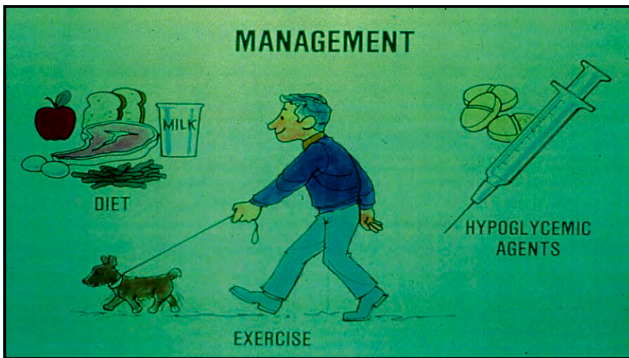

FAST FORWARD TO T1D CARE IN 1970

- NPH and regular insulins used only once or twice a day.
- Urine testing only
- No A1c test
- No pumps or pens
- No insulin analogs
- No CGM
- No Apps

Kevin on SL: Taking control of your diabetes: a patient oriented book on diabetes.
Fifth Edition Professional Communications Inc., Greenwich, CT, 2008.

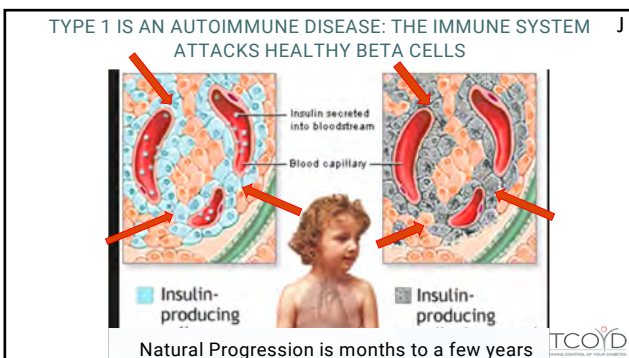

TCOYD
THE CANADIAN ORGANIZATION OF YOUTH WITH DIABETES

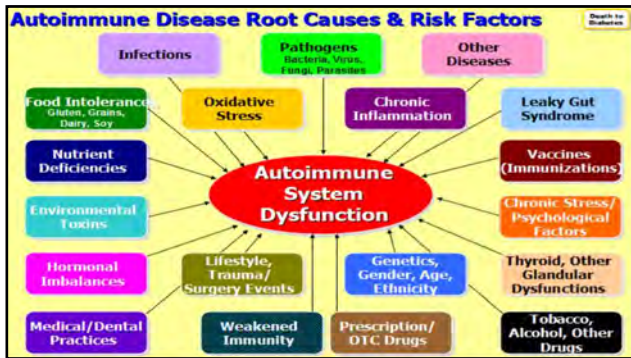

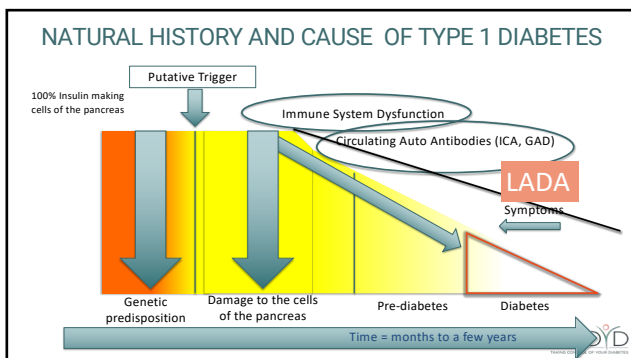

PREVALENCE OF T1D INCREASING IN US

- 1.3 million adults currently have T1D¹
 - 1 million adults \geq 20 years
- 21% increase in prevalence of T1D in people < 20 years between 2001-2009²
- 40,000 people diagnosed each year in U.S.²
- 5 million people in U.S. expected to have T1D by 2050²

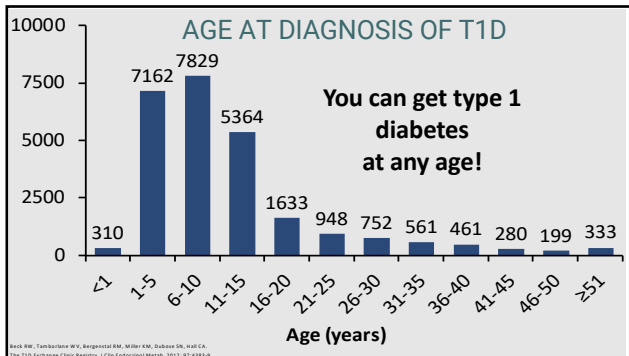

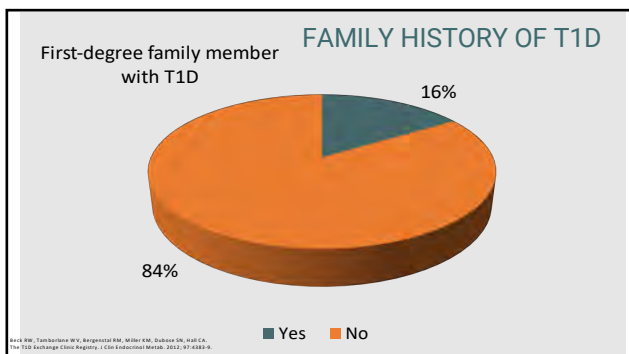

LATENT AUTOIMMUNE DIABETES IN ADULTS (LADA)

- The most missed diagnosis in diabetes
- Type 1 diabetes can occur at any age
- Slower beta-cell destruction (may respond briefly to oral agents)
- Typically does not have features of the Metabolic Syndrome
- Blood test positive for type 1 diabetes (GAD auto antibodies)

Gary Hall Jr.
Olympic Gold Medalist
World Record Holder

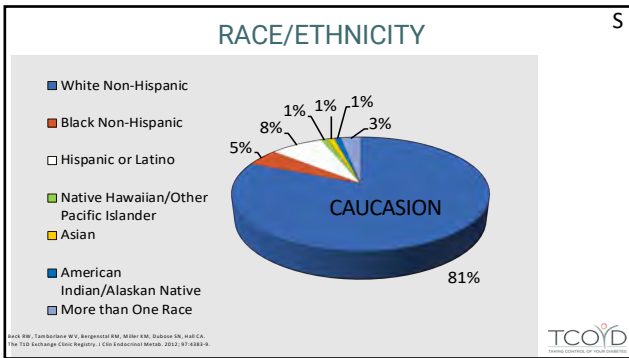

RISK OF DEVELOPING TYPE 1 VS TYPE 2

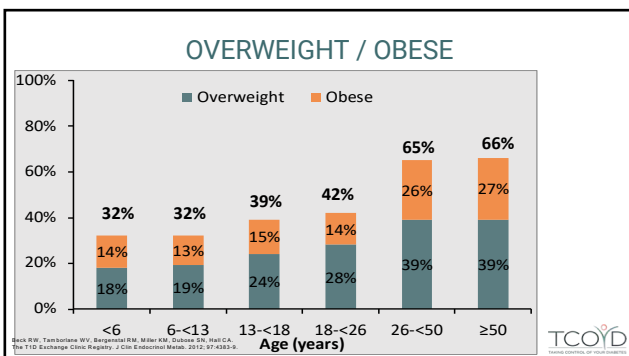

General Population	0.3%	8-11%
If you have a sibling with T1D	4%	~30%
If your mother has T1D	2-3%	~30
If your father has T1D	6-8%	~30%
If you have an identical twin with T1D	~50%	100%

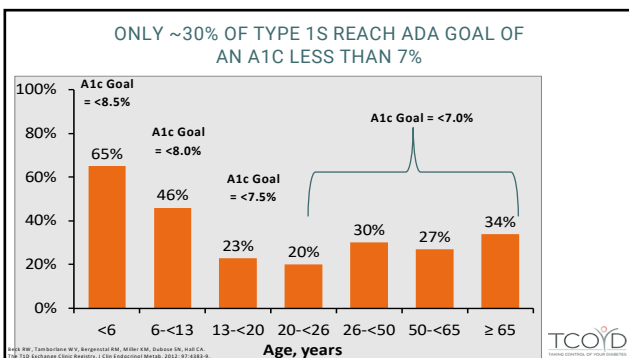

Editorial by: Taking control of your diabetes: a patient centered book on diabetes. 6th ed. Medical Professional Communications Inc., Greenock, SC. 1st page, 2017.

CONSEQUENCES OF WEIGHT GAIN

- Excess weight gain associated with risk factors for cardiovascular disease, including increased
 - Lipid levels
 - Blood pressure levels
 - Waist circumference
 - Metabolic syndrome

CASE 1: PHIL

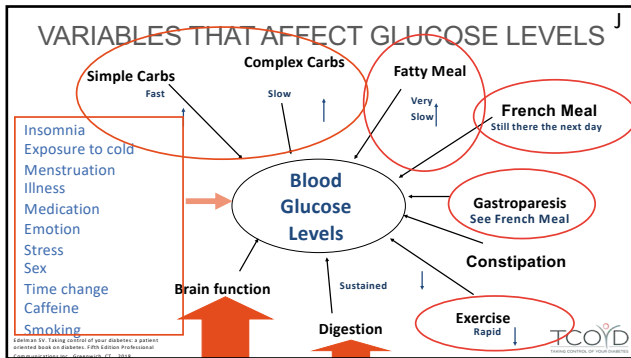

- ▶ 46 year old male with the diagnosis of type 1 diabetes at age 6 (Classic presentation of DKA)
- ▶ He has been on an insulin pump for many years
- ▶ Over the last 8 years he has developed central obesity and his insulin requirements doubled
- ▶ He also developed high blood pressure and dyslipidemia (triglycerides went up and his HDL went down).
- ▶ Family history is that his father and both paternal uncles have type 2 diabetes.

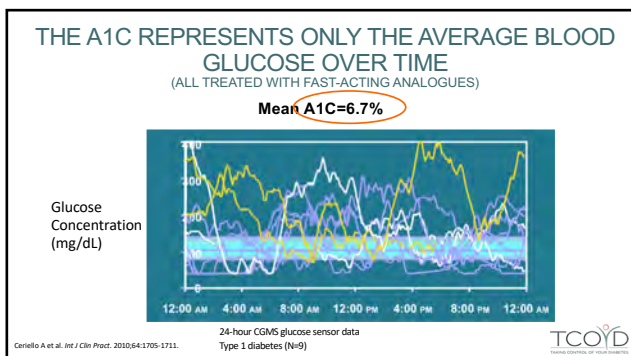

WHAT IS THE MOST LIKELY EXPLANATION OF WHY PHIL'S INSULIN REQUIREMENTS DOUBLED LATER IN LIFE?

A	He developed central obesity
B	He has both type 1 and type 2 diabetes
C	His A1c kept rising
D	He has high triglycerides

DESPITE FOLLOWING ALL OF THE RULES

1. Unexpected highs
2. Unexpected lows
3. Carb:Insulin ratio not working consistently
4. Correction Factor not working consistently
5. Not responding to insulin and exercise consistently

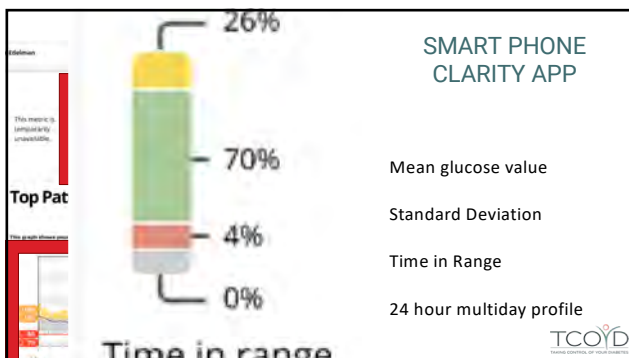

Edelman SV. Taking control of your diabetes: a patient oriented book on diabetes. Fifth Edition Professional Communications Inc., Greenwich, CT, 2018.

TCOYD

IT IS ALL ABOUT “TIME IN RANGE” KEEPING THE GLUCOSE LEVELS BETWEEN 70 AND 180 MG/DL

1. 1st priority is getting a CGM and educate your patients to respond to the trend arrows.
2. Bolus calculations are more than just the carbohydrates and static glucose readings
3. In addition to getting the A1c below 7%, try to reduce the daily glucose fluctuations in your patients (hyper- and hypoglycemia)
4. The insulin regimen should mimic what happens in a non-diabetic state

Goldman TV. Taking control of your diabetes: a patient-oriented book on diabetes. Fifth Edition Professional Communications Inc., Greenwich, CT, 2018

TCOYD

HOW CGM AND TRENDING INFORMATION CAN AFFECT DOSING DECISIONS

→	Constant: Your glucose is steady (not increasing or decreasing more than 1 mg/dL each minute)	3.0 units	No change in calculation
↗	Slowly rising: Your glucose is rising 1-2 mg/dL each minute		
↑	Rising: Your glucose is rising 2-3 mg/dL each minute		
↑↑	Rapidly rising: Your glucose is rising more than 3 mg/dL each minute	6.8 units	140% Mean Increase
↘	Slowly falling: Your glucose is falling 1-2 mg/dL each minute		
↓	Falling: Your glucose is falling 2-3 mg/dL each minute		
↓↓	Rapidly falling: Your glucose is falling more than 3 mg/dL each minute	1.5 units	48% Mean Decrease
no arrow	No Rate of Change Information: The Receiver is not connected to the Transmitter		

CASE 2: JEREMY

S

- 35 year old male with type 1 diabetes for 20 years
- CHO to insulin ratio 10:1
- CF 1:30 goal 120 mg/dl

Post "Snack" BS of 220mg/dL at 4:00 p.m.
(snack at 3:30 p.m., no insulin given with snack)

TCOYD

CASE 2: JEREMY (CONTINUED)

- Jeremy's CGM Guidelines
 - Correction factor 1:30
 - Target glucose 120 mg/dL
 - $220 - 120 / 30 = 3.3$ units

Note: A blood sugar of 220 does not lead to any symptoms

AUDIENCE RESPONSE SYSTEM

Text TCOYD to the number 22333

WHICH OPTION BELOW IS THE BEST SUGGESTION FOR JEREMY TO FOLLOW AT 4:00 PM?

- | | |
|---|---|
| A | Watch and wait (give no additional insulin) |
| B | Walk for an hour at a brisk pace |
| C | Give a correction dose of 3.3 units |
| D | Give a correction dose greater than 3.3 units |

ADJUST INSULIN DOSE BASED ON ANTICIPATED GLUCOSE IN 30 MINUTES

Adjusted Glucose Value for Bolus	
	No Adjustment. Dose for current glucose value.
	Adjust UP - current value plus 25-50 mg/dl. Dose for adjusted value.
	Adjust UP - current value plus 50-75 mg/dl. Dose for adjusted value.
	Adjust UP - current value plus 75-100 mg/dl. Dose for adjusted value.
	Adjust DOWN - current value minus 25-50 mg/dl. Dose for adjusted value.
	Adjust DOWN - current value minus 50-75 mg/dl. Dose for adjusted value.
	Adjust DOWN - current value minus 75-100 mg/dl. Dose for adjusted value.

Add 50 mg/dl

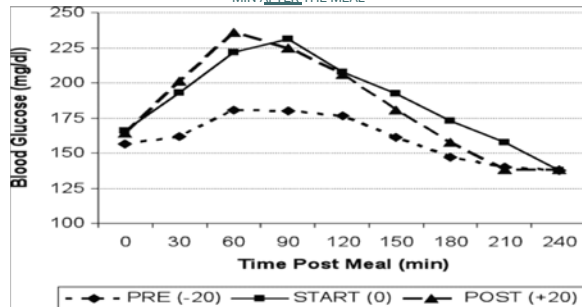

Add 75 mg/dl

Add 100 mg/dl

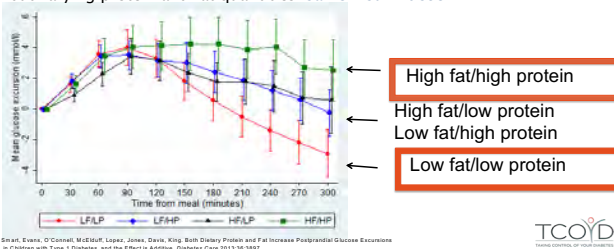

Wait until trend arrow becomes horizontal

BLOOD GLUCOSE AFTER A MEAL WHEN BOLUS GIVEN 20 MINUTES BEFORE, AT START, OR 20 MIN AFTER THE MEAL

BOTH DIETARY FAT AND PROTEIN INCREASE POST MEAL GLUCOSE CONCENTRATIONS

Four test breakfasts with identical carbohydrate content, but varying protein and fat quantities: same insulin dose

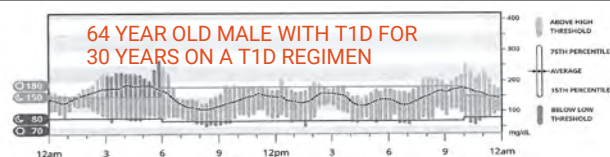

HOW MUCH FAST ACTING INSULIN WOULD YOU RECOMMEND TO A PATIENT EATING A MEAL WITH 60 GRAMS OF CARBOHYDRATES (INSULIN TO CARB RATIO IS 1 TO 10), AN 8 OZ FILET AND A SALAD WITH OLIVES AND AVOCADO SLICES?

A	3 units
B	6 units
C	12 units
D	More than 6 units

TCOYD
TODAY'S CLINICAL OUTREACH YOUNG DOCTORS

64 YEAR OLD MALE WITH T1D FOR 30 YEARS ON A T1D REGIMEN

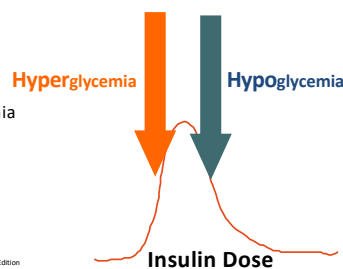

What is/are the possible causes of this patients glucose profiles overnight?

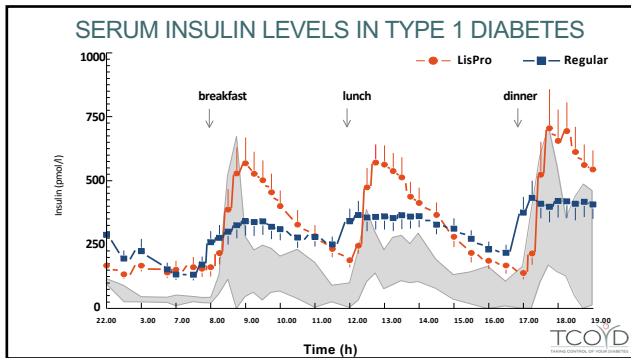

A	Needs more basal insulin
B	Needs to be more consistent in his dinner meals/times
C	He has gastroparesis
D	All of the above

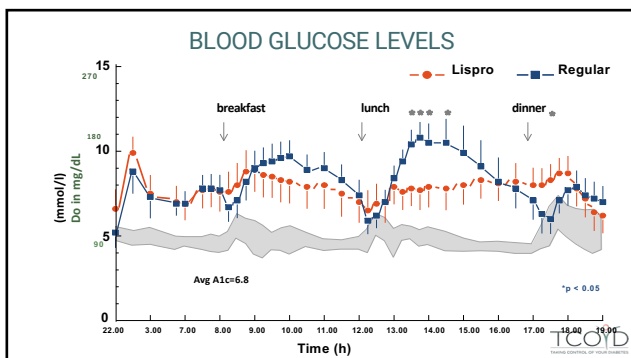

SUBCUTANEOUS INSULIN HAS A VERY NARROW THERAPEUTIC WINDOW ^S

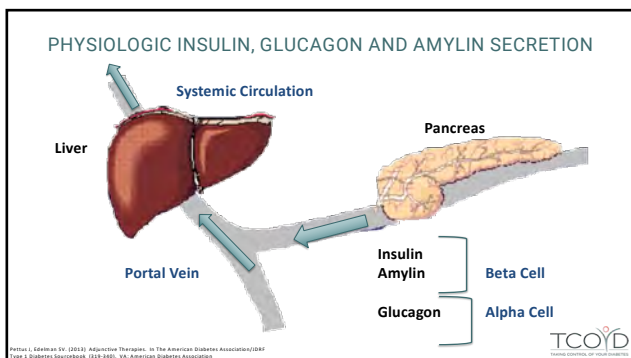

- Too little insulin leads to postprandial hyperglycemia
- Too much leads to hypoglycemia
- Very difficult to get it just right

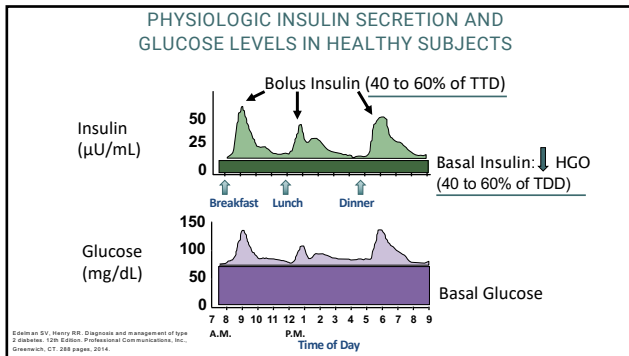

Edelman SV. Taking control of your diabetes: a patient oriented book on diabetes. Fifth Edition Professional Communications Inc., Greenwich, CT., 2018.

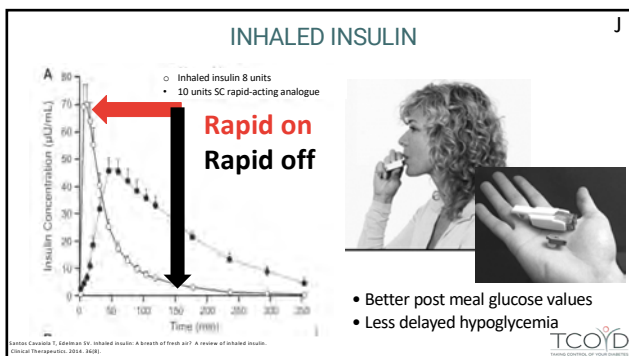

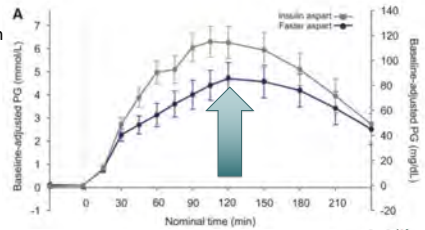

GENERIC AND TRADE NAMES: INSULIN		
	Generic Name	Trade Name
Fast-Acting Insulin 	Regular U-500 Regular Aspart Faster Acting Aspart Glulisine Lispro (U-100 and U-200) Follow on biologic lispro Inhaled Insulin	Humulin R, Novolin R Humulin R U-500 NovoLog Fiasp Apidra Humalog Admelog Afrezza

FASTER-ACTING ASPART (ADDITION OF L-ARGININE AND NIACINAMIDE FOR FASTER ABSORPTION)

2 hour PG levels in T1D on pump therapy after a standardized meal comparing Aspart with Faster Aspart

Boyle et al. JDTT Vol. 18, 2017

TCOYD

SHORTCOMINGS OF BASAL INSULINS INCLUDE:

- Hypoglycemia resulting in:
 - Insulin under-dosing
 - Insufficient glycemic control
- Weight gain
- Inconsistent insulin action...leading to inconsistent blood glucose levels
- Not enough flexibility with timing of injections
- Insufficient duration of action...therefore, requiring a minimum of 1 and, sometimes, 2 injections/day
- Large volume injections required for some patients

Expert Opin. Biol. Ther. (2014) 14(8):7909-88

TCOYD

TWO NEW BASAL INSULINS RECENTLY ADDED TO LIST OF OPTIONS

BOTH APPROVED BY THE FDA AND NOW AVAILABLE FOR PATIENTS

1. U-300 glargine a long-acting basal insulin
2. U-100 and U- 200 degludec a long-acting basal insulin

Toujeo prescribing information. Bridgewater, NJ: sanofi, US; 2015 <http://products.sanofi.us/toujeo/toujeo.pdf>
Tresiba prescribing information 2015. <http://www.novo-pi.com/tresiba.pdf>

TCOYD

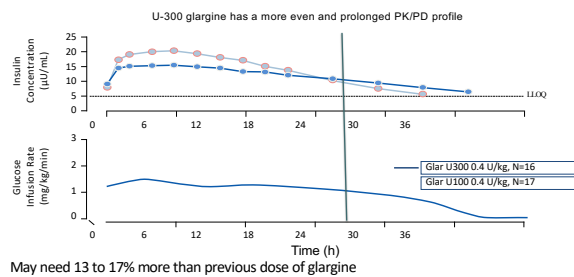

U-300 GLARGINE

- A more concentrated (300 units/ml) form of traditional glargine insulin (100 units/ml)
- Compared to U-100 glargine, U-300 glargine has less intra-subject variability, less hypoglycemia and less weight gain.
- Flat, stable and prolonged action up to 30 hours (**needs 5 days to equilibrate...tell your patients!**)
- In the clinical trials patients on U-300 glargine with type 1 and type 2 diabetes may require a dose 12 to 18% higher than previous U-100 glargine (still with less hypo and less weight gain).
- Pen holds 450 units
- New Pen holds 900 units and can give 150U at one time

PK/PD PROFILE WITH GLAR U-300 VS GLAR U-100

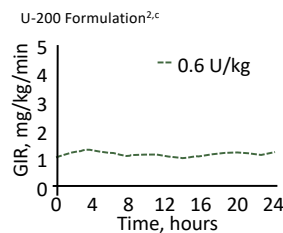

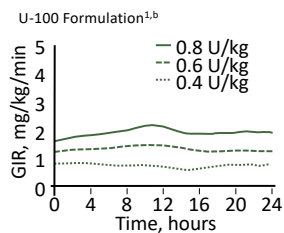

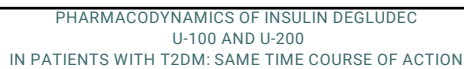

GLUCOSE INFUSION RATE IN SUBJECTS WITH TYPE 1 DIABETES INSULIN GLARGINE U-300

- Available as either 100 units/ml (~detemir) or 200 units/ml
- Long duration of action up to 42 hours (needs 5 days to equilibrate...tell your patients!)
- Peakless
- Low intra-subject variability
- Less hypoglycemia and variability compared to U-100 glargine
- Disposable pens hold a maximum of 300 (U-100) and 600(units)
- 160 units can be given at one time.

TCOYD

INSULIN PUMPS: ADVANTAGES

- **Improved glycemic control**
 - More precise, physiologic insulin delivery
 - Greater ability to handle dawn phenomenon, stress and other conditions that alter insulin requirements
 - “Smart features” help to estimate insulin doses and reduce errors, i.e. stacking insulin
- **In some situations (but not all) freedom and flexibility in lifestyle**
 - Eliminate multiple daily injections (1 stick every 3 days) Very easy to respond to CGM results
 - Reduce restrictions on eating, exercise and sleeping patterns; could have the same benefits with MDI
 - Greater flexibility with sports, travel, work schedule and other activities (not with water sports)

Edimex, Taking Control Of Your Diabetes 5th edition, 2018 and Walsh JA, Roberts R. Pumping insulin 5th edition, 2013.

TCOYD

PUMP VS. MULTIPLE DAILY INJECTIONS?

It comes down to personal choice!

TESTING THE BASAL RATE IN TYPE 1

Testing Overnight

1. Ask the patient have an early dinner, make sure the post prandial BS is between 140 and 180mg/dl (may need a correction dose) with a horizontal trend arrow
2. Fast until the next morning
3. If not on a CGM then he/she needs to test the BS every few hours

Testing During The Day (different day than testing pm)

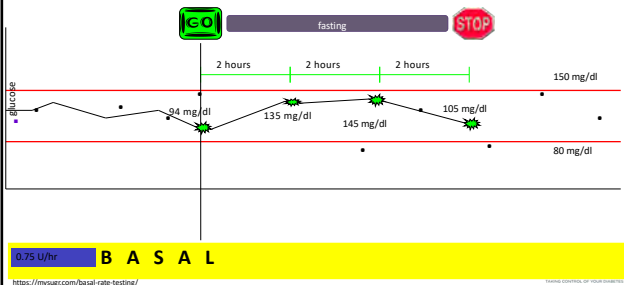

1. Ask the patient if he/she can skip breakfast and fast as long as possible.
2. If patient wants to eat a small breakfast then make sure the post breakfast BS is between 140-180mg/dl with a horizontal trend arrow

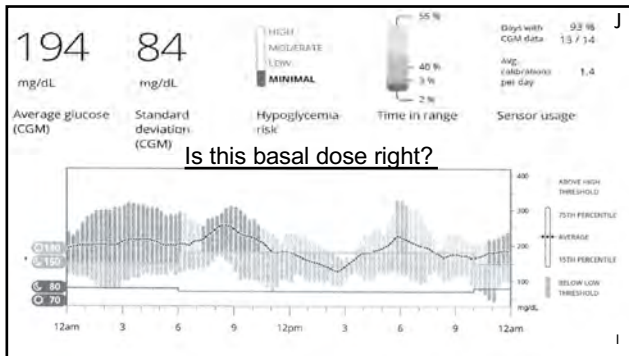

Elefther DV. Taking control of your diabetes: a patient oriented book on diabetes. Fifth Edition Professional Communications Inc., Greenwich, CT. 544 pages, 2017.

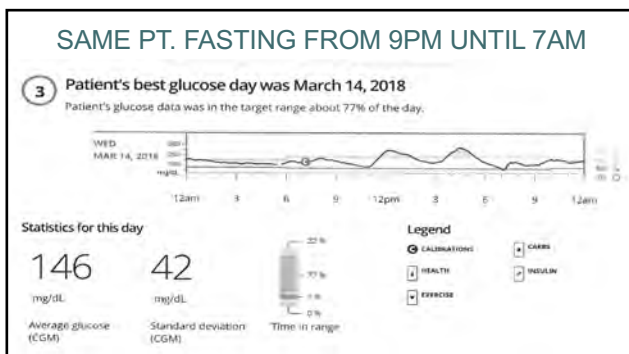

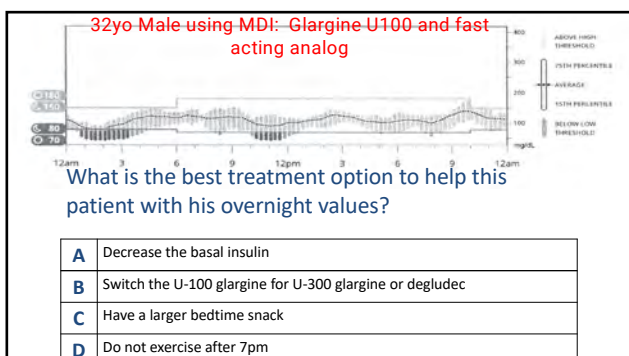

TESTING A BASAL SEGMENT IN T1D:

FOUNDATION OF ANY INSULIN REGIMEN

ADJUNCTIVE THERAPIES FOR PEOPLE WITH TYPE 1 DIABETES

5

- Amylin Analog (Pramlintide)
- Incretins (GLP-1 RA) *
- SGLT-2 Inhibitors*
- DPP4 Inhibitors*
- Metformin*

*Medications FDA approved only in type 2 diabetes at the current time

TCOYD

DPP-4 INHIBITORS IN T1D

- No statistically significant differences compared to placebo

METFORMIN IN T1D

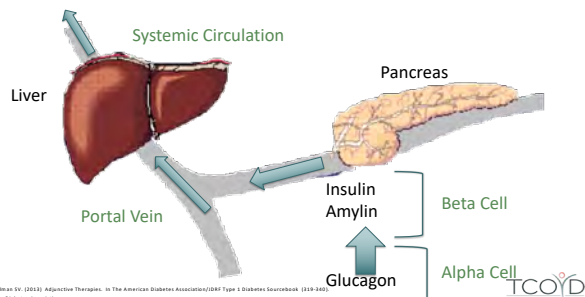

- No statistically significant differences compared to placebo in A1c, hypoglycemia and DKA
- Slight reduction in weight and insulin dose

SGLT 1/2 INHIBITORS IN T1D

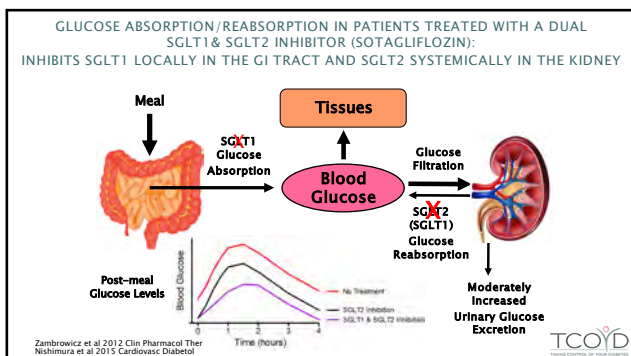

S

- There are 3 different drugs being studied in type 1 diabetes (empagliflozin, dapagliflozin and sotagliflozin)
- Sotagliflozin has filed with the FDA and is the furthest alone in development and will review the clinical trial data for Sotagliflozin in detail and summarize the other studies and also shown in the supplemental slide PDF
- If any are approved it would be the first oral agent for type 1 diabetes

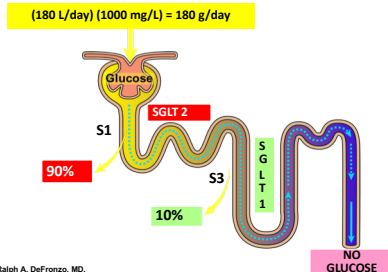

TCOYD

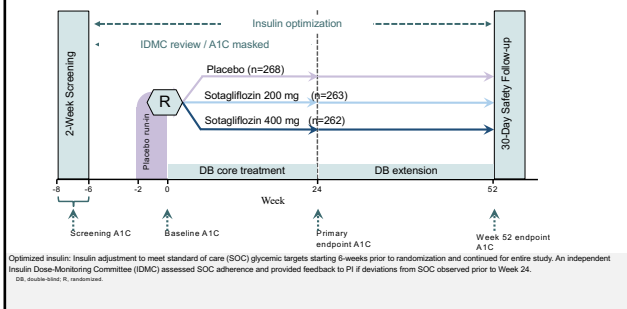

RENAL HANDLING OF GLUCOSE

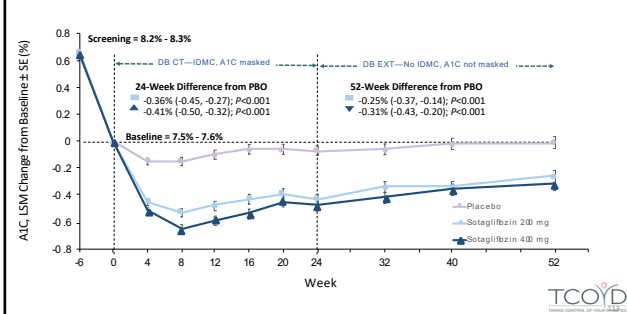

Slide courtesy of Ralph A. DeFronzo, MD.

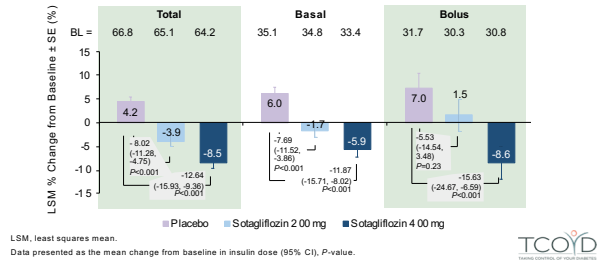

INTANDEM STUDY DESIGN

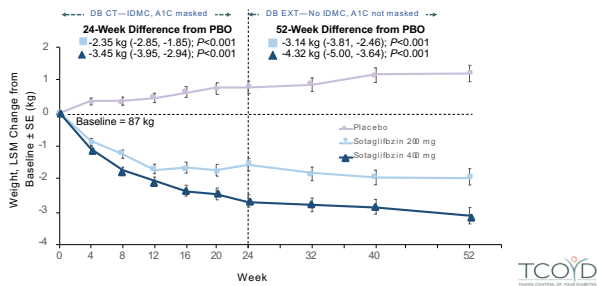

INTANDEM1: A1C

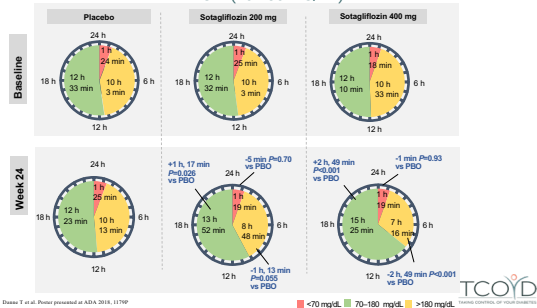

INTANDEM1: INSULIN DOSE

INTANDEM1: WEIGHT

INTANDEM 1&2 (POOLED): CONTINUOUS GLUCOSE MONITORING "TIME IN RANGE" (70-180 MG/DL)

SUMMARIZE FINDINGS FROM ALL SGLT -1/2 INHIBITORS (DIFFICULT TO MAKE PRECISE EFFICACY COMPARISONS ACROSS TRIALS DUE TO DESIGN AND ANALYSIS DIFFERENCES)

Efficacy (placebo adjusted)	Highest dose*
A1C reduction	~0.4%
Time in Range (blinded CGM)	~3 hour increase
Time in Hypoglycemia (CGM)	No change or some reduction
Insulin dose	10-15% reduction
Weight	~2-3 kg reduction
Systolic blood pressure	~3-4 mm Hg reduction
Patient reported outcomes	Improved

Clinically relevant adverse events include genital mycotic infections (primarily in women 12 to 15%) and DKA (3 to 4%), sometimes euglycemic DKA

* Lower doses retain much of the glycaemic efficacy with lesser effect on weight and blood pressure

RISK MITIGATION OF DKA WITH SGLT INHIBITORS

- If unable to eat or drink, hold the SGLT inhibitor
 - such as NPO, viral illness, surgery, colonoscopy, etc
- If on a SGLT inhibitor, avoid the keto diets and drink adequate fluids
- Do not prescribe in poorly adherent patients and use with caution if A1c above 9% or frequent episodes of DKA
- If nauseous or sick in any way, hold the SGLT inhibitor and troubleshoot their insulin delivery and check blood or urine ketones. If ketones are positive, take insulin per protocol along with carbs and fluids.
- If unable to drink and eat, go to the ER for fluids and further management.

APPROACH TO REDUCE DKA RISK WITH SGLTIS: STICH PROTOCOL

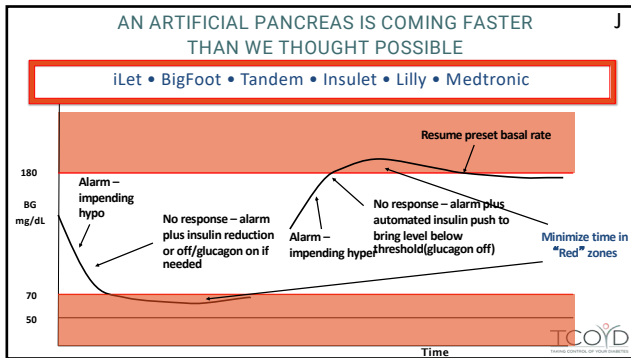

Wallet Card - front

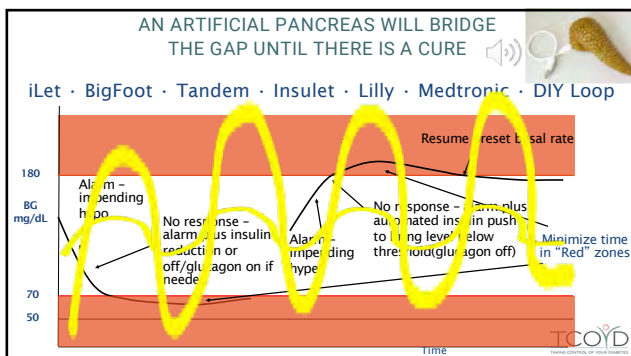

S	
T	STop SGLT inhibitor
I	inject bolus Insulin
C	consume 30 g Carbohydrates
H	Hydrate (drink water)

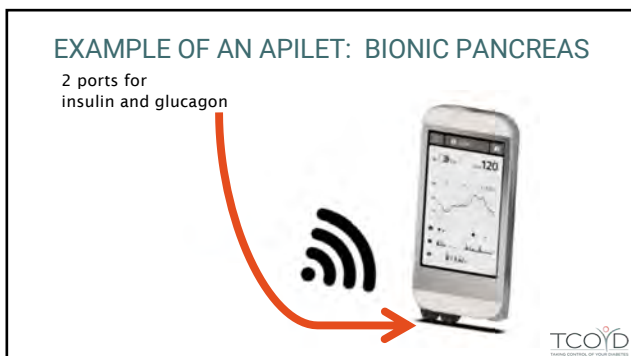

Please carry this card if you are using a SGLT inhibitor with insulin to treat diabetes

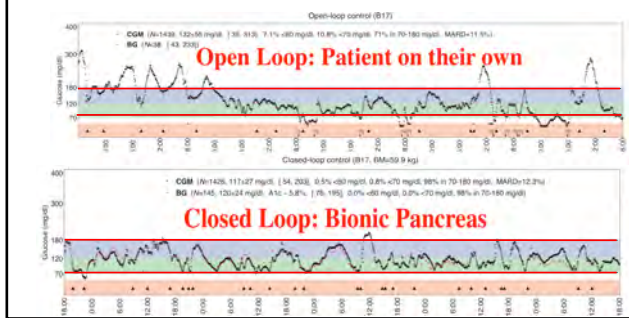

Garg S, et al. Diab Tech Ther 2018; epub.

CGM READINGS ON AND OFF THE BIONIC PANCREAS

SUMMARY

- The important unmet needs in T1D include improved glycemic variability (GV), increased time in range (TIR)
- Reaching A1c goal without hypoglycemia
- Controlling blood pressure and weight gain
- Addressing the emotional burden of living
- CGM and the newer ultra rapid and basal insulins can help improve TIR
- Adjunctive therapies can address some of the unmet needs

SUPPLEMENTAL DATA SLIDES

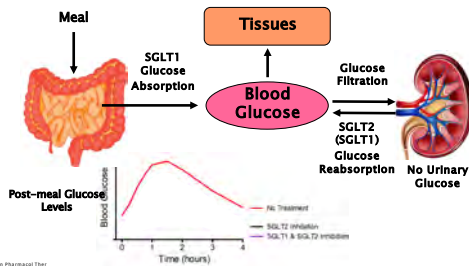

SGLT 1/2 INHIBITORS IN T1D

- There are 3 different drugs being studied in type 1 diabetes (empagliflozin, dapagliflozin and sotagliflozin)
- Sotagliflozin has filed with the FDA and is the furthest alone in development and will review the clinical trial data for Sotagliflozin in detail and summarize the other studies and also shown in the supplemental slide PDF
- If any are approved it would be the first oral agent for type 1 diabetes

Patient reported outcomes	Improved

Clinically relevant adverse events include genital mycotic infections (primarily in women 12 to 15%) and DKA (3 to 4%), sometimes euglycemic DKA

* Lower doses retain much of the glycemic efficacy with lesser effect on weight and blood pressure

RISK MITIGATION OF DKA WITH SGLT INHIBITORS

- If unable to eat or drink, hold the SGLT inhibitor
- such as NPO, viral illness, surgery, colonoscopy, etc
- If on a SGLT inhibitor, avoid the keto diets and drink adequate fluids
- Do not prescribe in poorly adherent patients and use with caution if A1c above 9% or frequent episodes of DKA
- If nauseous or sick in any way, hold the SGLT inhibitor and troubleshoot their insulin delivery and check blood or urine ketones. If ketones are positive, take insulin per protocol along with carbs and fluids.
- If unable to drink and eat, go to the ER for fluids and further management.

APPROACH TO REDUCE DKA RISK WITH SGLTIS: STICH PROTOCOL

Wallet Card - front

S	
T	STop SGLT inhibitor
I	Inject bolus Insulin
C	consume 30 g Carbohydrates
H	Hydrate (drink water)

Please carry this card if you are using a SGLT inhibitor with insulin to treat diabetes
